DOES | Capability Overview

Defense Operations & Engineering Solutions (DOES)
Founder-led services for people, industrial operations and accountable technology adoption.

Legal entity: Defense Operations & Execution Solutions, Inc., doing business as Defense Operations & Engineering Solutions.

Workforce training

Soft skills and technical learning for employers, individuals and teams in aviation, space, aerospace and defense, nuclear, biotech/pharma and semiconductors. Agree learning objectives, exercises, instructor fit, delivery approach, assessment and completion documentation for each engagement.

Drone structural components and wiring harnesses

Component supply for commercial and military drone applications, scoped to the configuration, interfaces, materials, quantity and acceptance needs. Manufacturing methods, sourcing responsibilities, inspection/testing and traceability are defined in the quotation or agreement. Program suitability and qualification require item-specific review.

Business consulting

Business strategy, operations improvement and program execution support. A scoped discovery assessment can produce a current-state summary, prioritized issues, an action roadmap and measures for reviewing progress. Deliverables and implementation responsibilities are agreed before work begins.

AI adoption support

Readiness and workflow assessment, use-case selection, pilot planning, employee preparation and human oversight. Define permitted inputs, reviewers, escalation rules and baseline measures; evaluate results before expanding use. People retain consequential decisions, approvals and signoff.

NDT, NDE and general testing

DOES scopes and coordinates non-destructive testing, non-destructive evaluation and general testing through qualified testing subcontractors for detail parts, components and subassemblies in aviation, aerospace and defense, space, nuclear and microelectronics. The provider, methods, qualifications, applicable specifications, acceptance criteria and reporting are agreed before work begins.

Start with a defined need

Share a non-sensitive overview of the service, goal, constraints, intended users and timing. DOES will discuss scope, useful outputs, required inputs and acceptance before pricing or scheduling commitments. Do not send classified information, CUI, export-controlled data, proprietary drawings or sensitive personal information through the public form.

Development-stage initiatives: TITAN-AI, electric motors and gas turbine engine capabilities are under development. This overview does not establish certifications, customer endorsements, production capacity or guaranteed outcomes.
